DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/31/2005 entered.

Reasons for allowance

2. The following is an examiner's statement of reasons for allowance:
- The prior art on record does not teach the claim of determination of information management system (IMS) database space for overflow sequential access method (OSAM) stored data files and its limitations of monitoring the database during the storing of the plurality of data files to determine an order in which the multiple disk storage volume are filled, the order determination comprising recognition of which of the multiple disk storage volumes is the last storage volume and recognition of one or more storage volumes preceding the last storage volume; Adjusting the measure of the measure of storage space utilized to full for the one or more storage

volumes preceding the last storage volume. These limitations are in independent claims 23 and 25.

- Murray et al. (US Patent 6,622,142) teaches a system and method for rapid unloading and reorganization of hierarchical databases. Whereas Koeppen (US Patent 5,761,667) teaches a method of reorganizing an IMS database. The method creates in storage device, a header data structure containing information about the size and key structure of the database. Coy et al. (US Patent 5,644,766) teaches a system and method for preserving special and temporal locality of sets of related objects when moving the sets within a storage hierarchy via common server. Pastilla et al. (US Patent 5,678,044) teaches a system and method for automated rehosting of at least one software system from a source computing environment to a predetermined target computing environment. Finally, Donovan et al. (US Patent 6,012,032) teaches a system and method of accounting and billing for data storage devices.
- Applicant's arguments filed on 3/31/2005 on page 9, paragraph 2 as "Murray does not describe any problem associated with using existing tools for space determination of a database that spans multiple disk storage volumes" and on page 10, paragraph 1, as "Murray and Koeppen both describe reorganization operations requiring the rearrangement of data files in the database" are persuasive.

3. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
